Declaration of Authorship

I, Kushagra Singh BISEN, declare that this thesis titled, “Implementation of a robot behavior learning simulator” and the work presented in it are my own. I confirm that:

- This work was done wholly or mainly while in candidature for a research degree at this University.
- Where any part of this thesis has previously been submitted for a degree or any other qualification at this University or any other institution, this has been clearly stated.
- Where I have consulted the published work of others, this is always clearly attributed.
- Where I have quoted from the work of others, the source is always given. With the exception of such quotations, this thesis is entirely my own work.
- I have acknowledged all main sources of help.
- Where the thesis is based on work done by myself jointly with others, I have made clear exactly what was done by others and what I have contributed myself.

Chapter 1

Context

1.1 Introduction

The work is based on an Industry 4.0 scenario, which is a cyber-physical environment consisting of various different actors and objects involved. The different actors involved are either stationary or mobile. Moreover, complexity of the environment increases when we account for heterogeneous actors with various decision making capabilities. Robots with various manufacturers present various transform frames, different software and sensors. Due to the heterogeneous nature of the robots involved, we can not depend on information we receive from the robot, as this particular information will differ from a robot to other based upon it's configuration. The problem is solved by creating a digital twin which records the information of the environment as well as the robot. The simulator notes the state of the robot and obstacles it surrounds as it passes through the obstacle grid.

1.1.1 What is a Robot?

Appendix A

Frequently Asked Questions

A.1 How do I change the colors of links?

The color of links can be changed to your liking using:

```
\hypersetup{urlcolor=red}, or  
\hypersetup{citecolor=green}, or  
\hypersetup{allcolor=blue}.
```

If you want to completely hide the links, you can use:

```
\hypersetup{allcolors=.}, or even better:  
\hypersetup{hidelinks}.
```

If you want to have obvious links in the PDF but not the printed text, use:

```
\hypersetup{colorlinks=false}.
```
